

FinStream AI — Smart Expense Flow

Next-Gen AI-Driven Corporate Spend Intelligence & Financial Dashboard.
AI-powered bookkeeping and cost intelligence for Indian manufacturing businesses

NASE COHORT A — MODULE 6 CAPSTONE PRO

The Problem

Indian SMBs and manufacturing businesses waste **15–20 hours/month** on manual financial grunt work.

Manual Sorting

Expense categorization across multiple entities — done entirely by hand

No Cost Visibility

Zero clarity on Direct vs Indirect cost split — critical for manufacturing

Zero Automation

Credit-Card/Bank statement reconciliation requires manual entry every single month

Handwritten Summaries

Monthly financial reports written manually — slow, error-prone, inconsistent

i Target Users: Manufacturing business owners, family business groups, and operations managers handling expenses across 3-5 business entities who want real-time financial intelligence — not just year-end accounting

The Solution

FinStream AI — one dashboard that does it all. Paste a bill, upload a PDF, or speak — AI handles the rest.

AI Expense Capture

Text, image, PDF, or voice — AI extracts and classifies instantly

Direct vs Indirect Cost Split

Manufacturing-grade automatic cost classification

Multi-Entity and Multi-Currency Support

KS, TI, CPM, AAS — tracked separately with a unified view

AI Narrative Summary

Plain English monthly financial report — generated automatically

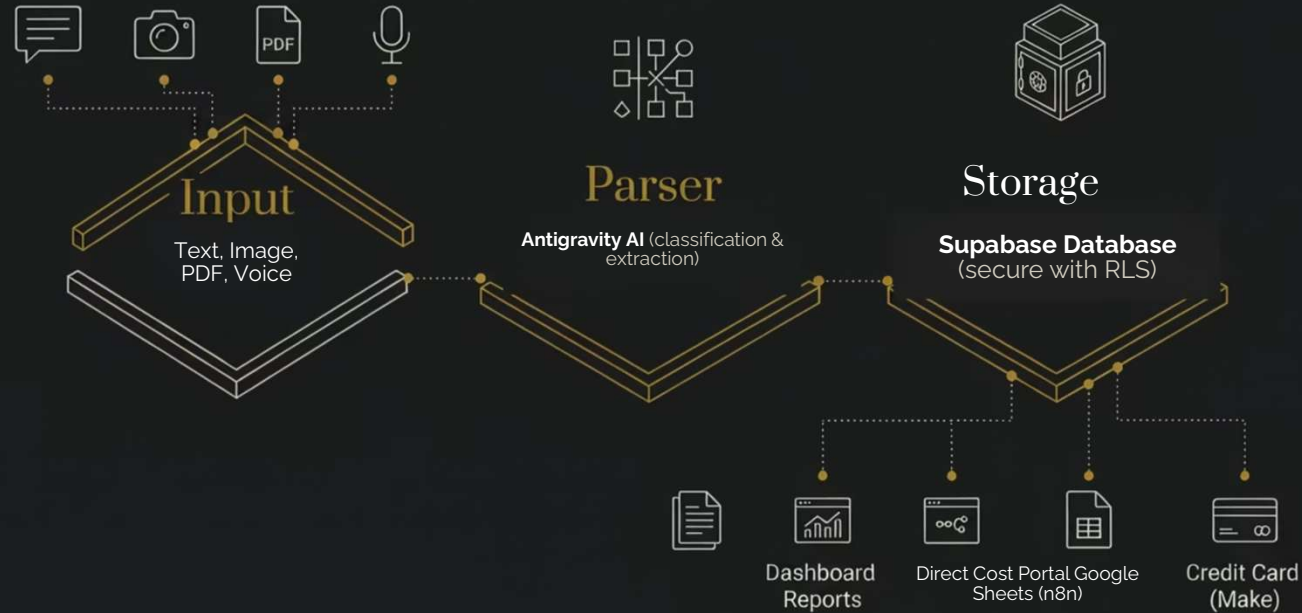

Google Sheets Export

One-click export via n8n automation

Product Architecture

A clean, automated pipeline from user input to intelligent financial reports — powered by AI and modern automation tools.

System architecture

Every layer is purpose-built: Antigravity AI handles classification, Supabase secures data with Row Level Security, Make.com parses statements, n8n drives Google Sheets export, and the Direct/Indirect Cost Portals deliver manufacturing-grade financial intelligence.

Key Features

Six powerful capabilities — built for the realities of Indian manufacturing finance.

AI Expense Capture

Text, image, PDF, or voice note - captured and classified instantly.
Instant parsing of Credit-Card Statements

Direct Cost Portal

Raw Material, Electricity, Labour, Repairs tracking with COP calculation

Indirect Cost Portal

Overhead ratio monitoring, budget alerts, and MoM trends

Reports & Analytics

AI Narrative Summary, Budget vs Actual, Period-over-Period comparison

Multi-Entity and Multi-Currency Ledger

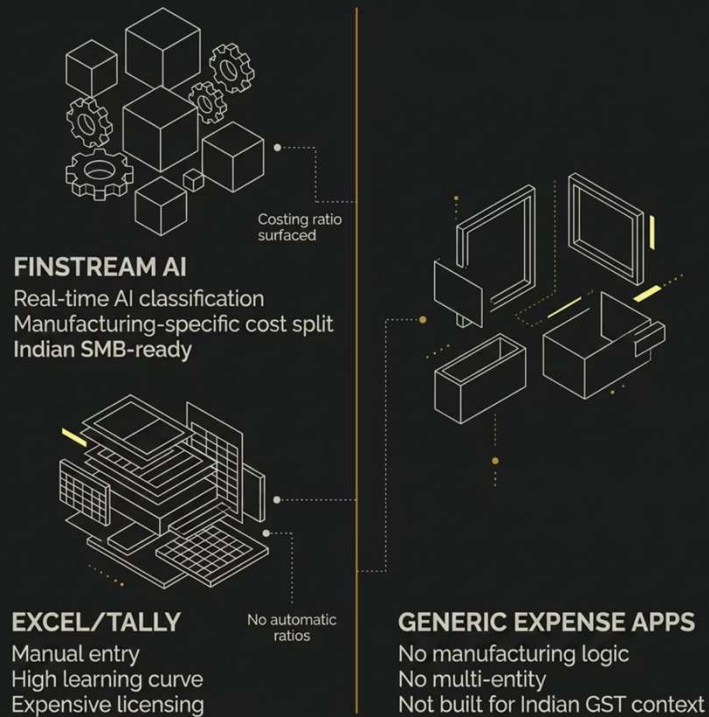

Separate tracking per business entity with a unified consolidated view.

Google Sheets Export

One-click export via n8n automation — zero manual effort

What Makes It Different

The Core Differentiator

FinStream AI is a great tool that automatically surfaces **Direct vs Indirect cost ratios** — a metric critical for manufacturing profitability but completely absent from every existing bookkeeping app in India. It notifies if we have crossed budget monthly, quarterly or yearly wise.

vs Excel / Tally

Real-time AI classification, zero manual entry

vs Generic Expense Apps

Manufacturing-specific Direct/Indirect cost split

vs Enterprise Software

Built in days, costs nothing, works for Indian SMBs

Tech Stack

Built with modern, serverless-first architecture — fast, secure, and cost-efficient at scale.

Frontend

TanStack Start + React, Vite, Typescript deployed on **Cloudflare Workers** for edge-speed performance

Database

Supabase — PostgreSQL with Row Level Security for multi-entity data isolation

AI Engine

Antigravity AI Gateway — Gemini-powered classification and natural language generation

Automation

Make.com for credit card statement parsing + **n8n** for Google Sheets export

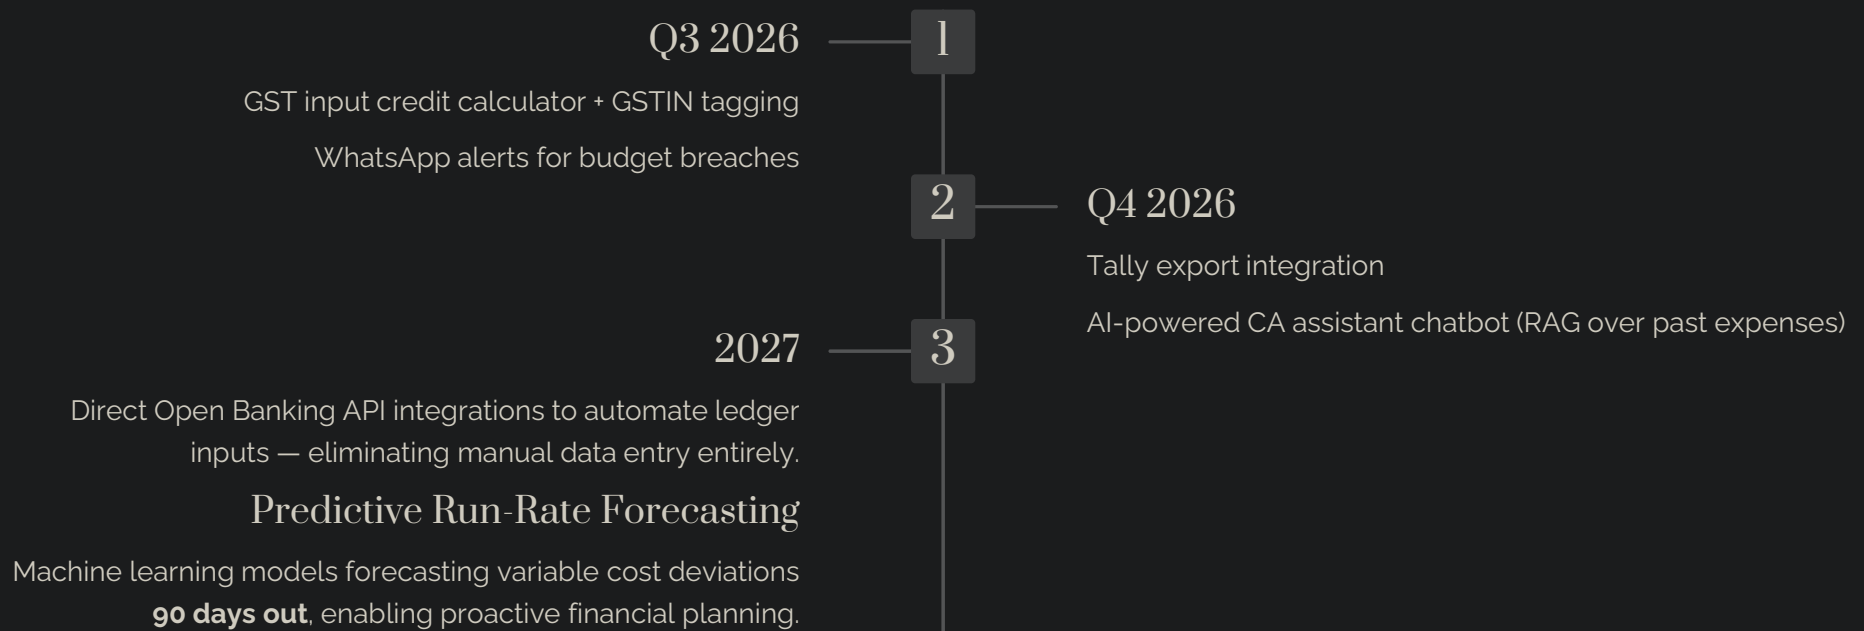

Design System

Bespoke custom CSS tokens leveraging **glassmorphic cards**, Custom component library with dark navy + gold premium financial theme

What's Next — Roadmap

A clear path from a working capstone product to a full-featured Indian manufacturing finance platform.

✅ **Multi-entity support is already live** — the architecture supports unlimited business entities under one login from day one.
